

THE NEW T-32 SHIFT REVOLUTION

T-32 SHIFT SCREEN SYSTEM LEG

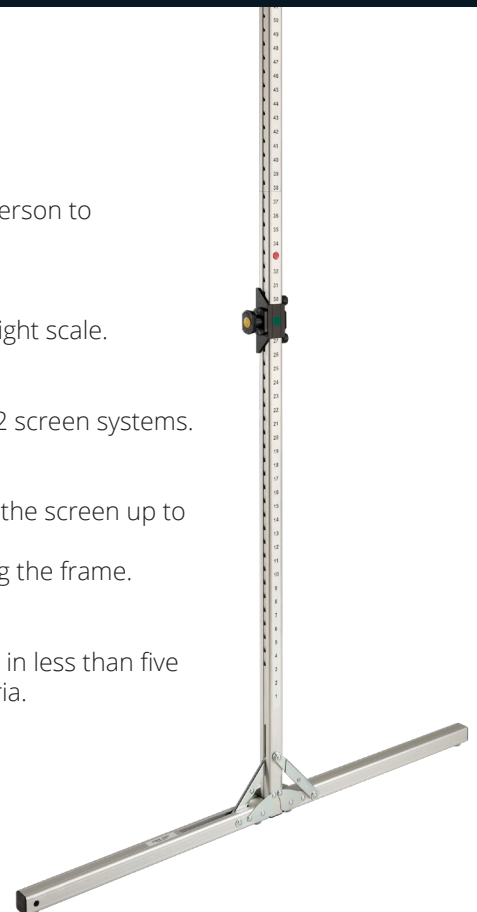

The truly revolutionary T-32 SHIFT screen system leg makes it possible for JUST ONE person to easily adjust a mobile projection screen's height, without having to disassemble it first.

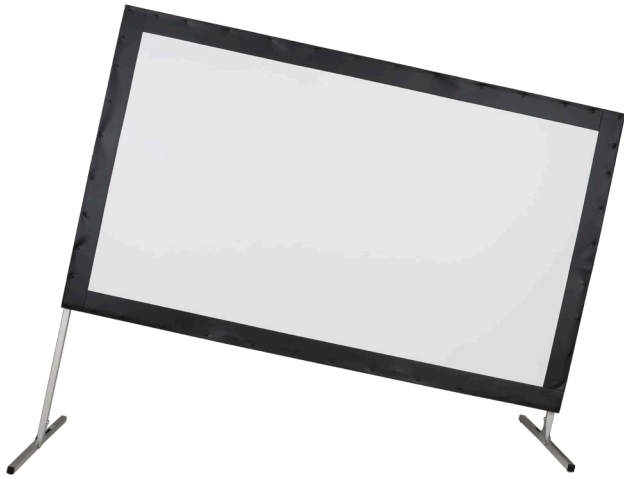

No extra measuring is needed to ensure the frame is level, due to a clearly marked height scale.

The T-32 Shift can be combined with existing AV Stumpfl Monoblox32 and MonoClip32 screen systems.

To adjust the screen height, one can start at the bottom of the scale and simply move the screen up to one's preferred position. The T-32 Shift will lock automatically.
To move the frame further down, one can just use the locking mechanism for releasing the frame.

It is now possible to assemble and adjust a complete mobile projection screen system in less than five minutes. Save time AND save money with premium quality components made in Austria.

Adjusting a mobile projection screen's height has never been easier.

FOUR REASONS WHY THE T-32 SHIFT IS TRULY REVOLUTIONARY:

1. Just **ONE person** needed for adjusting the screen height
2. **No additional measuring** needed
3. **Can be combined with existing AV Stumpfl screen systems Monoblox32 and MonoClip32**
4. Complete **assembly** and adjustment of a projection screen system **in less than five minutes**

Standard Monoblox Frame
